[†] Categorization of data (health condition) based on ICD-11; brackets indicate ICD-11 code.

[‡] Categorization of body functions (b), body structures (s), participation (restrictions) (p), and environmental factors (e) based on ICF; brackets indicate ICF-code, second level per domain.

[§] Categorization of personal factors based as identified in the literature; superscripts indicate direction of influence. If a source acknowledged one of the identified personal factors as a barrier to persons with disabilities' participation, it was coded -1, if it was labelled as a facilitator, +1. To avoid internal compensation, a personal factor was either coded positively or negatively, implying that the maximum value that could be attributed to a personal factor is |40|.
